Introduction

Welcome to the seventh edition of *The Times Difficult Su Doku*. I love this series of books and have spent many happy hours working through them. They are the ideal way to develop your Su Doku skills, because you can work your way up through the different levels, focusing on one level at a time.

With Difficult puzzles the hardest part is often getting started. A good way to begin is to systematically work through each digit from 1 to 9 in turn. Begin with the 1s and look at where they are in the puzzle and how they align along the rows and columns. Imagine each row with a 1 in it greyed out, and each column. Look for any 1s that can be resolved by scans or cross-scans (Fig. 1):

Cross-Scan

	A	B	C	D	E	F	G	H	I
1			8	7					
2		7			8	6			
3	6	3					9	7	8
4	9		7	8		1	3		
5	1			5		4			7
6			5			7			1
7	4	1	6				8	2	
8				4	1		7	3	
9						8	4		

Fig. 1

In Fig. 1, row 7 and column I both contain 1s and can be visualized as greyed out. The effect in the bottom right region, where they cross, is that H9 is the only cell remaining that is not already resolved or greyed out, so it has to be a 1.

Now look for scans and cross-scans in the 2s, 3s, and so on. There are not actually any in this example until you get to the 6s (Fig. 2).

Cross-Scan Combination

	A	B	C	D	E	F	G	H	I
1			8	7					
2		7			8	6			
3	6	3					9	7	8
4	9		7	8		1	3		
5	1			5		4			7
6			5			7			1
7	4	1	6				8	2	
8				4	1		7	3	
9				⁶	⁶	8	4	1	

Fig. 2

At the 6s, you can take the concept of scanning further by looking for combinations of cross-scans. In this case, column F and row 7 both contain 6s and make a cross-scan in the bottom centre region. This reveals that D9 and E9 are the only cells in the region that can contain 6s. It is not possible to tell which cell is the 6 yet, but as they are both in row 9 it can also be greyed out because it is not possible for a 6 to be anywhere else in the row. I8 must therefore be a 6.

Once you have checked for any other possibilities for scans, cross-scans and combination cross-scans in the 6s, move on to the 7s, and so on. Once you finish the 9s it is a good idea to cycle around from 1 to 9 again, because each time a cell is resolved it opens up new possibilities for the next time around.

Scanning for Asymmetry

	A	B	C	D	E	F	G	H	I
1			8	7			1		
2		7	1	1	8	6	1		
3	6	3	1	1			9	7	8
4	9		7	8		1	3		
5	1			5		4			7
6			5			7			1
7	4	1	6		7		8	2	
8				4	1		7	3	6
9	7					8	4	1	

Fig. 3

In the type of scan shown in Fig. 3, it can be seen that the 1 in the top left region can only be in row 2 or 3 and, likewise, the 1 in the top centre region can only be in the same two rows (2 or 3). Therefore, as there must be a 1 in row 1 somewhere, it has to be in the top right region. The only cell in the region that can have a 1 in row 1 is G1, so G1 is resolved as a 1.

Keep cycling from 1 to 9 until you get stuck and cannot get any further in the puzzle with scans. At this point, you need a new technique. What you can do next is to fill in each empty cell with the possible digits that it can contain. Most people fill in small digits in pencil so that they can be erased later. Start with the rows and columns with the least empty cells. What you are looking for is a cell that can only contain one particular digit, and rows or columns where a specific digit can only go in one position.

Filling In

	A	B	C	D	E	F	G	H	I
1			8	7			1		
2		7			8	6			
3	6	3					9	7	8
4	9		7	8		1	3		
5	1	^{2 6} ₈	²	5	3	4	^{2 6}	^{6 8} ₉	7
6	3		5			7			1
7	4	1	6		7		8	2	
8				4	1		7	3	6
9	7		3			8	4	1	

Fig. 4

In Fig. 4, the empty cells in row 5 have been filled in with all the possible digits. This reveals that:

- H5 is the only cell in the row that can contain 9.
- The only digit that can go in C5 is 2; and that
- G5 and B5 can now be resolved as well.

Continue filling in this puzzle, doing the rows, columns and regions with the least empty cells first (i.e. column G, which now has only two empty cells, and the bottom right region).

Note that as you resolve cells by filling in, new opportunities for scans and cross-scans emerge. For example, having resolved G5 as 6 above, the 6s in columns G and I, and rows 2 and 3, can now be cross-scanned to resolve H1 as 6. This is a very important point to appreciate with Difficult Su Dokus – the act of resolving one cell opens up the next opportunity, so that one resolution leads to the next, like following a path. Whenever you resolve a cell, therefore, your next action should always be to look around it, and scan away from it, looking for the next step in the path. There are many paths through a Difficult Su Doku, and you just need to latch onto one of them and follow it.

The combination of filling in and then looking for the scans and cross-scans that emerge will be enough to finish this particular example. If you do get stuck filling in, a good way out is to cycle through 1 to 9 again looking for new scans that have opened up or were missed previously.

Filling In Pairs

	A	B	C	D	E	F	G	H	I
1			8	7			1	6	
2		7			8	6			
3	6	3					9	7	8
4	9		7	8		1	3		
5	1	8	2	5	3	4	6	9	7
6	3		5			7			1
7	4	1	6		7		8	2	⁵ 9
8	8			4	1		7	3	6
9	7		3			8	4	1	⁵ 9

Fig. 5

It is also very useful to fill in pairs, as shown in Fig. 5, in I7 and I9, because this is almost as good as resolving the cells from the point of view of opening up further moves. In this case, as shown by the greying out, cross-scanning the 5s now allows H4 to be resolved as 5, and then G2 is another 5. There are, in fact, five pairs hidden in the example above (I7/I9, C2/C3, B4/B6, A1/A2 and G2/G6). Filling in all of these and then following the scans and cross-scans that emerge is another way of finishing the puzzle.

The techniques that have been described here will be enough to enable you to solve every puzzle in this book. Good luck, and have fun. Once you have mastered this level it will be time to move on to *The Times Fiendish Su Doku*.
