

THE ULTIMATE MENSA PUZZLE BOOK

in association with

Mensa
The High IQ Society

MARKS & SPENCER

This book contains hundreds of puzzles created by Mensa, the world-famous high IQ society. Pit your wits against some of the most intelligent puzzle designers in the world.

Inside you'll find visual and spatial teasers, crafty conundrums and all sorts of challenging logic puzzles to help you exercise your brain and achieve your maximum mental potential!

The Ultimate Mensa Puzzle Book is split into two sections, and it is crammed full of puzzles of all difficulty levels to suit the beginner or even the most dedicated puzzle-fan. The answers are included in case you get stuck as you work your way through a huge variety of superb puzzles.

THE ULTIMATE MENSA PUZZLE BOOK

Contributors: Robert Allen, Dave Chatten, Carolyn Skitt

Mensa is the international society for people with a high IQ. We have more than 100,000 members in over 40 countries worldwide.

The society's aims are:

- To identify and foster human intelligence for the benefit of humanity
- To encourage research in the nature, characteristics, and uses of intelligence
- To provide a stimulating intellectual and social environment for its members

Anyone with an IQ score in the top two per cent of the population is eligible to become a member of Mensa – are you the 'one in 50' we've been looking for?

Mensa membership offers an excellent range of benefits:

- Networking and social activities nationally and around the world
- Special Interest Groups – hundreds of chances to pursue your hobbies and interests – from art to zoology!
- Monthly members' magazine and regional newsletters
- Local meetings – from games challenges to food and drink
- National and international weekend gatherings and conferences
- Intellectually stimulating lectures and seminars
- Access to the worldwide SIGHT network for travellers and hosts

For more information about Mensa, write to us at British Mensa Ltd., St John's House, St John's Square, Wolverhampton, WV2 4AH or visit the Mensa website.

INTRODUCTION

This huge collection of puzzles is split into two distinct styles. On each double-page spread you'll find one or two visual brainteasers and a logic, or lateral thinking puzzle, too. The brainteasers require you to draw on your powers of observation, common sense, methodical thinking and patience as you try to figure out the answer. Remember, it's not always the obvious choice! The logic puzzles are a mixed bunch too. Some require mathematical thought, some simple guesswork and others just a bit of plain old luck. The trick with them is to never give up – you never know when inspiration will hit you.

The puzzles are in no particular order, so you can solve them from start to finish, dip in as you feel, or even from finish to start. So get going, and enjoy the wide variety of puzzles in this book.

See p. 248, answer 117

THE DISAPPEARING MAN

One cold winter morning Jayne was walking down a narrow country lane. On either side of the lane there were four houses. Jayne noticed that each house had a different-coloured front door and different-coloured cars parked in the driveways. Outside one of the houses she noticed a man standing in the garden. He was very well dressed with a hat and scarf on to keep him warm. She waved at the gentleman and shouted, "Hello!" and he smiled at her. Later that day when she came back along the lane she noticed the man again. She waved to him and said, "It certainly is getting warmer, it doesn't feel as cold as it was this morning." The gentleman smiled at her and she went on her way, counting the cars that passed her as she went. The next day when Jayne went down the lane she noticed the gentleman had gone. Where?

CLUES

1. He had not gone inside the house or any other house.
2. He had not walked down the lane in any direction.
3. He had not driven anywhere by car.

See p. 251, answer 7

PUZZLE 2

A

B

C

E

Can you find the odd shape out?

See p. 249, answer 170

ARISE

A man was exploring a mountain when he slipped and fell. He was 150ft from the summit when he slipped, but he was at the top after the slip. He did not climb the rest of the way and he was not lifted to the top by colleagues. How did he slip to the top?

CLUES

1. He was on the same mountain and the top was above him.
2. He was not supported by a balloon filled with hydrogen or helium.
3. No ropes or pulleys were involved.
4. No thermals were involved.

See p. 254, answer 68

PUZZLE 3

A

To which of these diagrams could you add a single straight line to match the conditions of the top figure?

See p. 249, answer 145

HIGH DAYS AND HOLIDAYS

King Henry wanted to change all of the high days and holidays and called his ministers together. He decreed that holidays would occur on the high day and on the low day of each week, and these were Saturday and Friday respectively. This would involve re-ordering the days of the week according to a sequence going from high day to low day. What would the new order of days be?

See p. 252, answer 38

PUZZLE 4

J Q G O T D

Y N S Z P

W K M V H F

Most anagrams give you a heap of mixed up letters and ask you to sort them out. This one is different. The letters above are the ones you do NOT need to complete the puzzle!

See p. 250, answer 176

PUZZLE 5

The four main mathematical signs have been left out of this equation.
Can you replace them?

See p. 250, answer 184

THE SHARE-OUT

Three American children were counting the money that they had when they found that they each had only one value of coin. Each child had a different value of coin and each had different numbers of coins. They calculated that if each child gave two of their coins to each of the other two children, they would all have the same amount of money.

If they finished with \$1.80 each, how many of each coin did each child have to start with?

See p. 255, answer 103

PUZZLE 6

Can you unravel the logic behind these domino pieces
and fill in the missing letter?

See p. 248, answer 122

PUZZLE 7

A. Los Angeles

B. Dallas

C. Houston

D. Kansas

E. Chicago

All the suitcases are shown with their destinations. Which is the odd one out?

See p. 244, answer 60

MY HOMEWORK IS RIGHT!

At a local infant school a teacher gave the children a few maths problems for homework. The next day the teacher pulled Tom out and told him that he had all of his wrong.

His answers to the problems set were:

Why did Tom think his answers were right?

See p. 255, answer 90

PUZZLE 8

This grid is made up according to a pattern.
Can you work it out and complete the missing section?

See p. 242, answer 9

BOB THE MISER'S WILL

Old Bob was a miserly man who never spent his money. His 'Last Will and Testament' stated that he wished to be cremated together with the proceeds of his estate. He did not wish to give his money to his relatives.

When the will was read, the relatives stated that Bob was not sane when he made the will. The judge ruled that he was and Bob's wishes should be followed.

The Judge did, however, find a way to comply with Bob's wishes and at the same time please the relatives. How was this done?

H

See p. 250, answer 173

A-HAUNTING WE WILL GO!

An ancient castle had been converted into a hotel. After a few months, many ghostly sightings had been reported. The manager was under pressure as many bookings were being lost, but he was getting some business from ghost hunters. The problem was that he could not guarantee to match the appearances with the right guests, until one day he noticed a pattern in the sightings and their timings. If he could predict where and when the ghost would appear, he would keep all of his guests happy.

He found that from January through to March, room number 3 was haunted every other night. From April through to June, room number 4 was haunted every third night. From July through to September, room number 9 was visited by a ghost every fourth night. He then needed to plan which room would be visited in the last quarter of the year and the frequency. How did he work this out and what was his answer?

See p. 252, answer 40

PUZZLE 10

Pick up one letter from each bulb in numerical order. You should find the names of five US states and two dummy letters. What are they?

See p. 243, answer 46

PUZZLE 11

Can you spot the cube that cannot be made from the layout above?

See p. 249, answer 167

UNEASY PEACE

The warring clans of the Campbells and the McPhersons were brought together by a marriage between the son and daughter of the opposing leaders. The clan members, however, were still very loyal to their own clan and suspicious of the opposing clan. For the first few years all activities among the clans had an equal number from each clan in the teams of workers. This covered building houses, hunting, fishing, cooking etc.

On one fateful day the fishing boat, which had a crew of 30 (15 from each clan, and headed by the Campbell leader), ran into a bad storm and the boat began to sink. The head of the expedition agreed with the crew that half of them would have to take a risk and swim for shore in order to save the boat and the remaining crew. The head man said that he would be fair in the selection of those to leave, and that he would line everyone up in a single line formed in a circle and every ninth person would have to go. The crew agreed, and each was allotted a position numbered 1 to 30.

How did he line them up so that only McPhersons were left?

See p. 251, answer 2

PUZZLE 12

Can you work out which number the missing hand on clock 4 should point at?

See p. 248, answer 137

PUZZLE 13

Can you unravel the logic behind this square and find the missing letter?

See p. 246, answer 91

THE STRONG SWIMMER

A good swimmer jumped from his boat in the middle of the Mediterranean Sea. He swam only 100 feet from his boat and then he sank and drowned. What caused this?

CLUES

1. He did not have cramp or any physical or mental health problems.
2. The waves were very light and had no bearing on the tragedy.
3. No third party was involved and his death was not because of an attack by sharks, pirates, etc.
4. He did not get tangled in any nets or weeds.
5. No other swimmer would have survived in his place.
6. The water may have been a few degrees warmer where he sank.

See p. 253, answer 45

Can you spot the pattern of this grid and complete the missing section?

See p. 248, answer 115

BROTHER SIMON

Brother Simon was a monk of an order that no longer exists. He does, however, have a new job, which ensures that the old monastery collects thousands of pounds each year from tourists. After tourists are shown into his old cell the doors are locked with all the tourists still in the cell. There is a small window, which is too small to get through, but Brother Simon manages to get out every time. How does he do it?

CLUES

1. He does not have a key and the lock is not picked. The door is not opened.
2. The walls are solid with no loose stones.
3. He does not go up or down to escape the room.
4. The room warms up when he leaves the room.
5. I would not go into the room with Brother Simon.

See p. 251, answer 19

Each tractor has been working for the time shown. The figure under the tractor shows how many tons of potatoes have been gathered. Clearly some strange logic is at work! How many tons has tractor A gathered?

See p. 246, answer 90

THE KING IS IN HIS ALL-TOGETHER!

We have all heard the song about the king and the magic clothes that only the most intelligent people could see, but did you know that this has since been tested in the opposite direction?

A crowd of people who watched a parade saw all of the people in the parade without clothes on. They were all wearing clothes at the time. How was this accomplished?

CLUES

1. No hypnosis.
2. No tricks of light or use of special glasses.
3. No use of x-rays.
4. The crowd were not related to Superman.
5. They did not undress or pass by twice.

LOTTERY WINNERS

This week's lottery was won by a syndicate of 10 people. Between them they won £2,775,000. They all contributed different amounts into the syndicate and their winnings were calculated against their contributions. If the amounts were all different but the cash differences between each step remained uniform, what amount did the second-highest winner get given that the sum of the lowest three amounts was equal to the sum of the top two amounts?

Can you work out the logic behind this square and complete the missing section?

See p. 246, answer 93

ANTONY & CLEOPATRA

One of the guards at a Roman estate found Antony and Cleopatra dead a few feet away from each other at the end of the day. He immediately called Octavian who confirmed that they were both dead. Octavian ruled out poison and there was no sign of foul play. He did see a small crack in the floor, which ran between the two bodies, and concluded that the crack caused their death. He was right, but how did they die?

CLUES

1. They had not been strangled or suffocated.
2. They were both naked.
3. They were both good swimmers.
4. They did not injure themselves by diving into an empty bath or swimming pool.

See p. 252, answer 36

PUZZLE 20

Which of these layouts could be used to make the above cube?

See p. 249, answer 149

NYLON BALL- BEARINGS

A factory made millions of tiny ball-bearings out of a nylon polymer. These were incredibly tough and light in weight, as well as very cheap. When a few dozen were put on a concrete floor they could support a truck. They were stored in very large wood compartments, which were 15 feet deep. Under normal circumstances the material used is quite safe and not poisonous. The death of a worker was viewed rather differently by the coroner. Why?

CLUES

1. He was not killed in the manufacturing process.
2. He did not fall as a result of ball-bearings being used.
3. Nothing hit him or crushed him.
4. His death was not caused by toxic fumes from the material or as a result of fire.

PUZZLE 21

See p. 250, answer 178

LEVITATING BALLOONS?

A family had inflated several different-sized balloons with air and tied the ends so that they would not deflate. These were left all over their front-room floor before they went out shopping. When they returned and looked into their front room from outside the house, they were surprised to see that all of the balloons were two inches above the floor. Why was this?

CLUES

1. The room and the balloons were at the same temperature and all of the doors were firmly closed. The doors had draught excluders fitted.
2. The balloons did not contain any gases that were lighter than air.
3. The balloons were not held up by strings and no shock wave was involved.
4. Static electricity or electric charges were not the cause.
5. The cause was not air circulation.

E

F

G

See p. 246, answer 86

RACETRACK JOE

Racetrack Joe had been taken into hospital for a serious heart condition. The nurse who looked after him noticed that he had several betting slips in his pocket when he was admitted but she thought that these should be kept from him until he was well. The extra stress, she thought, might upset his recovery. After two weeks of total rest following his operation, the nurse gave him the daily newspaper as well as his betting slips and wallet. Looking at his first betting slip and newspaper, he noted that his first horse had won at 50-to-1 and he had £50 to win on it. When he left hospital his first call was to collect his winnings of £2500. They refused to pay him, but do you know why?

CLUES

1. There was no time restriction on the betting slip.
2. The bet was valid and he had paid \$50.
3. The bookmaker had not disappeared or gone bust.
4. He did not owe \$2500, or more, to the bookmaker.
5. He had not made a mistake when filling out his betting slip.
6. The horse had won and was not subject to disqualification.

See p. 253, answer 55

PUZZLE 23

Can you find the odd shape out?

See p. 250, answer 185

NO FIRE FOR EXPLORERS

Neil and Dave were exploring new territory. They felt a little cold and decided it was time to build a fire from some newspapers and dry bits of wood, which they had brought with them. The matches were all unused and dry, but would not light; their lighters would not work even though they seemed in perfect condition, and they even resorted to flintsparks and using the sun's rays through a strong magnifying glass.

Nothing worked. Why?

CLUES

1. They were above ground and in the open.
2. There were no winds or draughts.
3. It was not wet or humid.
4. The newspaper was not wet or damp.
5. All the equipment for lighting the fire was in perfect condition.

KING-ELECT

The king had died some time ago and the queen replaced him on the throne as Head of State. They had two children who were twins. Both were delivered at birth by caesarean section, and both were born at exactly the same time.

A king had to be chosen. One of the two was very intelligent and loved by everyone, but the other was not so bright. He was not liked at all and was not favoured by the queen or parliament. It was the latter who was chosen. Can you work out why?

CLUES

1. There were no corrupt motives involved.
2. The constitution was used to elect the king.
3. The intelligent child did not die and was not harmed or locked away.
4. The queen agreed with the decision.
5. Foreign powers were not involved.
6. Marriage did not form part of the decision.

H

See p. 249, answer 154

PROBLEMS WITH AIR POLLUTION

A chemical plant had a major fire, which was so ferocious that it took 12 hours for the fire brigade to get it under control. The police had to evacuate all the houses within a one-mile radius because the fumes were so toxic that they would kill anyone who inhaled them within minutes. The wind initially blew the toxic gases from the west toward the east, and blew constantly for 3 hours and 20 minutes. The police, however, started to clear the houses to the west of the plant because this seemed to make a great deal of sense. This evacuation procedure saved thousands of lives, but then the wind changed to blow from the east toward the west. Those who had not been evacuated either died or had serious medical problems. The wind continued to blow in this direction until the fire was completely extinguished. Only those people living to the west of the plant died. Why?

CLUES

1. It did not rain.
2. Deadly toxic fumes were released all the time.
3. The toxic fumes were heavier than air and did not go over and beyond the one-mile danger circle in the east.
4. Nobody in the east had breathing apparatus and none was evacuated.
5. Closing doors and windows did not give total protection.

HAPPY NEW YEAR AND AGAIN ETC.

It is August and a 26-year-old woman says that she has never missed a New Year celebration in her life. She also claims to have seen the New Year in 51 times. How could she be telling the truth if she was born in June?

CLUES

1. She only counted January the First as a New Year and other religious or cultural New Years were not counted.
2. She did not cheat by winding her clock back.
3. Her 26 years were using a modern calendar and she lived in modern times on the planet Earth.

Which of these layouts could be used to make the above cube?

See p. 250, answer 181

HEAD-ON ANT CRASH

A rod of steel has a line painted on it from one end to the other. It is then twisted in the middle so that the line is half on one side and half on the opposite side. The line is painted only as wide as a quarter of an ant's width. These ants are intelligent and they are told that they must remain on the line or perish. The ants are placed at either end of the rod and told to go to the other end of the rod where they will be fed in safety. If they meet each other, they will both be killed. How do the ants resolve this problem and achieve their goals?

CLUES

1. The rod was solid and could not be made hollow.
2. The ants could not avoid each other if they were both on the line. They could not jump over each other.
3. Both ants were fed and neither died.
4. The rod was not suspended or spun round.

See p. 251, answer 8

PUZZLE 29

Can you work out the logic behind this square and fill in the missing section?

The registration plates of all these cars conform to a certain logic. Can you work out the final plate?

See p. 246, answer 84

SINKING ROBOTS

Mission control had calculated everything down to the last detail. Experiments conducted on the planet ZOD on a previous visit showed that the mobile robots would be able to walk on ZOD's surface. The spacecraft was, however, blown off course and was forced to land on a planet similar in size to ZOD. The two robots were ejected before the crash landing and were not damaged in the descent to the surface. They then sank below the level of the surface and could not move. What caused this?

CLUES

1. The soil make-up was the same on both planets and the soil density on the crust of both planets was the same.
2. They did not land on wet ground or water.
3. They did not sink because of impact speed on landing.
4. If they had ejected over ZOD they would not have sunk.

See p. 251, answer 16

PUZZLE 31

Can you work out the reasoning behind this grid and complete the missing section?

See p. 250, answer 182

ST. JOSEPH'S CHURCH

Daniel's family were very religious and always went to church on Sundays. Daniel's father had been asked to relocate because of a job promotion and they moved the family to a new city on the Saturday. The move was difficult and took all day, and the whole family, except Daniel, slept in on the Sunday morning. Daniel felt tired but decided he would find his local church and thank God for the safe move straightaway, and he would lead the others to church a little later in the day. The sign outside the church said St Joseph's Catholic Church. He entered to find a service was being conducted but he did not understand a word that was being said. Why?

CLUES

1. It was nothing to do with accents.
2. They had not moved to a country outside the USA.
3. Daniel was only 10 years old.
4. The language used in the church was English and not Latin.
5. He did not have a problem with his ears. He could hear everything that was said.
6. The city they moved to was Washington.

See p. 255, answer 88

PUZZLE 32

Can you work out which is the odd diagram out?

See p. 249, answer 153

THE REJECTED RECRUIT

Bright Sam was desperate to work in electronics for the Army. He was one of the brightest people in his class and excelled in electronics theory. When he failed to get into his chosen trade in the Army he was devastated. He knew that he was best qualified yet the Army did not want him. He later received a letter from the Army offering him a job that could save his colleagues' lives, a job that would involve him using his special gift. Can you work out what this was based on the clues given below?

CLUES

1. He could not do electronics or signals because he was colour-blind.
2. He was physically fit and intelligent.
3. His vision was very good, other than his problem with colours.
4. He was young and ideal for combat.

THE GREAT SOCCER PLAYER RETIRES

A great player who had given his club and country years of good service was honoured by being given a testimonial soccer match between his club and his country. It was to be his last game before retirement. The match score was 3-2 and he had scored four goals but finished on the losing team. Can you work out what happened if:

CLUES

1. He scored all of his goals at one end of the stadium.
2. The winning goal was an own goal and it had not been scored by him.
3. He turned around at half-time to play in the opposite direction from the way he played in the first half.

See p. 254, answer 70

PUZZLE 35

Can you work out which of these symbols comes next in this sequence?

See p. 247, answer 104

PUZZLE 36

Each balloon has been sponsored by a famous newspaper. The number is somehow linked to the paper's name. What is the number of *The Independent's* balloon?

See p. 246, answer 78

THE DEADWOOD STAGE

In the days of the Wild West a prospector was planning to go on the morning stagecoach to take him back east. He had struck gold and decided to celebrate in style. That evening he had drunk enough whiskey to make him drunk twice over. In the morning he was at the saloon on time to get the stagecoach, but it would not take him back east. Why was this?

CLUES

1. He had a valid ticket and money for the trip.
2. Other people wanted to go back east but nobody stopped them.
3. There was plenty of room for him on the stagecoach.
4. It was not a dangerous trip.
5. The driver for the stagecoach and the horses left on time.

This is another anagram in which we haven't given you only the letters you do NOT need. Find the missing letters, rearrange them, and you should find the name of the hero of a Gothic novel. The N is used more than once and one other letter is repeated.

See p. 250, answer 172

LITTLE BREEDERS

A man went to a pet shop and asked for a pair of budgerigars. The shopkeeper sold him a pair of birds who seemed inseparable in the shopkeeper's cage. Six months later the man revisited the shop to complain that no eggs had been produced. The shopkeeper wished to keep the customer happy and gave him another budgerigar that had just laid eggs and reared the young. Six months later, the man returned again with a story of disappointing failure. Why did the hen birds fail to lay a fertile egg?

CLUES

1. There was nothing wrong with any of the birds.
2. They had the right diet.
3. They were all at an age that was right for breeding.
4. It was a quiet and peaceful house.

See p. 252, answer 26

This grid is made up according to a certain pattern.
Can you work it out and fill in the missing section?

See p. 243, answer 42

THE BROKEN VASE

A man's grandfather died and left him, among other things, a vase. As soon as he took charge of his inheritance the man smashed the vase. Paradoxically he was then much better off than he had been before. How?

of its artist?

See p. 247, answer 102

PUZZLE 47

Each car's number is related to its driver's name. Can you predict which
car Pascal will drive?

See p. 246, answer 79

THE BOUQUET OF FLOWERS

A florist is making up bouquets using roses, carnations, and chrysanthemums. Twice as many of the bouquets contain carnations only as chrysanthemums only. There is one more bouquet containing roses only than carnations only. There is one more bouquet containing all three types of flowers than a mixture of roses and carnations only. There are exactly the same number of bouquets containing roses only as a mixture of carnations and chrysanthemums only. There is one more bouquet containing both roses and chrysanthemums only than containing chrysanthemums only. Two bouquets contain chrysanthemums only and 18 do not contain any chrysanthemums.

CLUES

1. How many bouquets contain roses only?
2. How many bouquets contain only two of the three types of flowers?
3. How many bouquets contain carnations only?
4. How many bouquets contain all three types of flowers?
5. How many bouquets does the florist make in total?

CHARGED BY A BULL

Four ramblers walked down the lane, past the stream, over the hills to the edge of a field. The field was full of cattle. Before the ramblers managed to reach the other side of the field they were charged by a bull. Why did the ramblers make a formal complaint when none of them suffered an injury?

CLUES

1. They did not run to safety.
2. They were not scared.
3. The cattle took no notice of the ramblers.
4. Bulls had charged others in the past but not for a period of time.
5. The charging bull was fully fit and fully grown.

THE FAN

A young boy going to an important soccer match decided to paint his face green, the colour of his favourite team. His team won the match and he celebrated for hours with his friends after the game. When he got home he was dismayed to discover that his face was blue and not green. Why?

CLUES

1. He was not painted a second time.
2. The paint was not affected by ultraviolet light.
3. The paint did not dry to blue when it was applied.
4. The paintbrush was clean and had no chemicals on it.
5. The change was not a result of temperature-sensitive or light-sensitive additives.

BIG BILL

Big Bill was extremely tired one evening so he turned the light off and got into bed. The next morning he awoke to hear on the radio of a terrible tragedy that happened in the early hours of that morning, killing over 100 people, and it was all his fault. Why? He did not wake up and he did not sleepwalk.

CLUES

1. The weather outside was bad, with poor visibility.
2. Bill was tired as he had not slept the previous night or through the day.
3. His alarm bell had been broken and it no longer rang.
4. If he had done the same things the night before, more people would probably have died.

BUSH FIRE

There was a forest fire in Australia. After the firemen had managed to put out the fire, the search for bodies began. After two days of searching they found a man in complete scuba diving gear. Although he was dead, he had not been burned at all. The forest is 20 miles from any water. How did he get there?

CLUES

1. The man had not walked to where he was found.
2. The man had not been murdered. It was an accidental death.
3. His wet suit was not burned or melted.
4. The man had several broken bones.

THE ARABIAN PRINCE'S CAR

The Arabian prince bought a top-of-the-range car with white leather seats, state-of-the-art hi-fi, television, and every extra imaginable. It was his pride and joy to own such a car. When he got it he found that it had that 'new' smell so he stuck an air freshener on to the top of the front windscreen, and it dangled from the sucker by means of a string. After only one hour the perfume from the air freshener gave the car a beautiful smell, and the prince was very happy. He decided to drive to his father's palace in the desert to show him his delight. He left a newspaper on the dashboard and a present on the back seat for his father. A guard was posted to look after the car. His father was out but returned 2 hours later to find his son in the palace waiting for him. He rushed his father into the courtyard to find the car on fire and the guard throwing water over it. What caused the fire?

CLUES

1. The fire started inside the passenger section of the car.
2. No electrical or fuel problems existed.
3. The present did not contain any flammable materials.
4. Firearms and matches were not involved.
5. Spontaneous combustion was not the cause.
6. It had nothing to do with chemicals in the air freshener.
7. The guard had nothing to do with the cause of the fire.

MOVING SUITCASES

A family on vacation in Florida were on their way back one day to their rented apartment only to see their empty suitcases placed at the side of the road almost two miles from the apartment. They stopped their car and inspected the cases, which had their names on the name labels. Why had their suitcases been placed at the side of the road?

CLUES

1. They had paid their rent and still had one week's rent paid in advance.
2. They had been away for the day.
3. They had not been burgled.
4. The landlords did not have the suitcases removed.
5. They had left the suitcases in the apartment before leaving for the day.

AMATEUR SAFE-CRACKERS

Two cowboys, Lightfingers Harry and Desperate Dave, decided that they would blow open the safe in the town bank, which contained many thousands of dollars. They had never blown a safe before but they knew where they could get as much gunpowder as they might need. Over a drink in the saloon they asked a drunk gold prospector how much gunpowder they would need. He told them about 2 pounds, but Desperate Dave insisted that they used twice the amount to make sure. They entered the bank, poured the gunpowder, and lit the fuse. The safe did not open and not a sound was heard. Why?

CLUES

1. All of the gunpowder was used and it ignited. The powder was dry and they used all 4 pounds.
2. They did not try to soundproof the room and it was not soundproofed already. People were nearby.
3. The powder was placed on and around the safe, close enough to get the job done.

THE IMMOVABLE SCREW

A man decided to repair his wife's vacuum cleaner (much to her despair, since he had shown no aptitude with electrical or mechanical problems in the past). The first job was to remove the screws using his screwdriver. He ensured that the right size and type of point on the screwdriver matched the screw head perfectly. He then engaged the screwdriver to the screw head, applied the necessary force, and turned the handle anti-clockwise. The screw would not come out and it would not loosen. Why?

CLUES

1. The pressure applied by the husband was adequate to remove the screw.
2. Turning the screw anti-clockwise was the correct way to loosen and remove the screw.
3. Good contact between the screw and screwdriver was maintained. The screwdriver did not slip off the screw head.
4. The thread in the hole did not get stripped and the screw was not damaged or deformed.
5. His wife was able to undo the screws without any problems using the same screwdriver and without lubricants.

TWO BROTHERS

In 1914 there were two brothers of an aristocratic family in England. When war broke out the first brother volunteered for the army without delay. After basic training he was sent to the front line. He was an officer and led his unit with complete distinction for over 12 months. Upon his return for a rest he went to his family home to find his brother just having a good time. For generations his family had served their country with honour, but his brother was bringing shame on the family name. The officer returned to the front and suffered an injury; while in the hospital he sent a letter to his brother, which caused his brother to enlist as a foot-soldier and win medals of distinction and bravery. The letter sent did not contain a letter or any words from his brother. Yet he knew by what was in there what it meant. What was in the letter?

CLUES

1. The handwriting on the envelope was not his brother's.
2. It had a postmark that could not be read.
3. His brother did not speak to him to cause him to change his mind.
4. The envelope contained something that weighed no more than the envelope itself.
5. There was no message on the envelope.

THE BATH OF LIQUID

A man fell into a full bath of liquid at work. When he got out he was dry, but he was taken straight to a hospital. Can you explain why he was dry and why he was taken to hospital?

CLUES

1. The liquid in the bath was at room temperature.
2. There were warning signs to keep clear.
3. It was an accident that caused him to fall into the bath.
4. He had fallen gently and had not suffered a concussion or any severe blows.
5. The liquid in the bath was 4 feet deep, and little was lost when he fell in.
6. He was not wearing any protective clothing.
7. He had not ingested any of the liquid.
8. He was required to burn his clothes.

See p. 254, answer 77

PUZZLE 64

Can you work out which of these shapes would fit together with the shape above?

See p. 248, answer 116

CAR PARK OVERCROWDING

A company had a car park where all of the 10 spaces were allocated to its managers. They expanded the business and a new manager joined them. Part of his contract was to have a car-park space, just like the other managers. How was this achieved if nobody was asked to double-park?

CLUES

1. The cars could not obstruct either of the access roads.
2. All of the spaces between the cars had to remain the same.
3. The extra car could not be parked in a location away from the front office wall, and all of the other managers kept their slot.
4. All of the cars needed to be parked at the same time.

See p. 256, answer 109

PUZZLE 65

Can you work out the reasoning behind these squares and replace the question mark with a number?

See p. 248, answer 120

THE COURIER'S WAIT

The courier phoned his customer to say that the crate that he had brought with him weighed one ton, and that they would need lifting equipment to unload it. He was less than a mile from the delivery point but it would be 6 hours before he could get there. He had covered the 20 miles from the collection point in just over one hour. Why would it take so much longer to reach the delivery point given the following clues?

CLUES

1. He was not taking a detour, and there was no traffic between his current position and the delivery point.
2. He was not being held up because of other meetings or people.
3. The delay was not caused by unloading or loading any other products.
4. If it was $5\frac{3}{4}$ hours later, he could make the same journey in 15 minutes.
5. The roads in the area were free from traffic congestion and road works.
6. The reason was not due to anything anyone did.

LEAP TO SAFETY

A man sleeping on the top floor of a three-storey house awakes to find smoke coming under his bedroom door. He gathers as many of his treasured possessions as he can possibly hold and leaps out of the bedroom window. Even though his arms are full, he doesn't drop or break anything and he does not injure himself. Why?

CLUES

1. Some of the items were fragile and would have broken if they had hit the ground.
2. He did not jump on to a ledge on the house.
3. No ladders, ropes, or safety nets were employed.
4. He did not jump into water or soft snow.

A FRUITY PROBLEM

A woman has a small collection of artificial fruits on the windowsill. The Apple is rosy red on one side and bright green on the other side, and there is a little white stalk sticking out from the top. The peach is a lovely soft warm shade of pinky-orange, with a larger white stalk. There is also a pear and a deep burgundy-coloured plum. The woman leaves them on the windowsill and goes out of the room. When she returns half an hour later she cannot see the fruits at all. Why?

Nobody else has been in the room. Nobody has moved them. There is nothing blocking her view; the room is clear, and there is no mist.

CLUES

1. They had not been stolen.
2. They had not been eaten.
3. A telltale clue had been left.
4. The room had an unusual smell about it when she returned.
5. Animals and insects had nothing to do with the disappearance.

DISAPPEARING TREAT

At a sweetshop a young boy was allowed to choose what he wanted. He came out of the shop happily clutching a full bag. He made a hole in the top of the bag and began eating. He only ate a small amount of the contents but within half an hour his bag was virtually empty. He did not drop the bag or its contents. He did not give any away, throw any away, or transfer the contents into anything else. Where did the contents of the bag go?

CLUES

1. Only about 5% of the content of the bag had been consumed.
2. The hole in the bag did not let any of the contents out.
3. The contents were not eaten by insects or anything else.

Can you work out which diagram would continue the series?

See p. 249, answer 161

THE MESSY EATER

Much to his colleagues' annoyance, Arthur brought fruit to the office each day for his lunch. He would peel his banana and leave the skin lying around, drop apple cores all over the floor, spit the pips from his grapes over other people's desks, and he was forever squirting people in the eye with his orange. Arthur still brings fruit to work but no longer gets complaints from his colleagues. He still eats fruit, he has not done or said anything to his colleagues, and his colleagues have not changed. Why does he no longer get complaints?

CLUES

1. He did not work with animals and the office was normally a clean environment.
2. He no longer used his fingers to hold the fruit.

See p. 254, answer 63

PUZZLE 74

The diagram gives the speed, number and distance covered for each balloon.
Can you work out the distance for A?

See p. 245, answer 69

PUZZLE 75

Can you work out which of these symbols follows the sequence?

THE FABRIC SHOP

In a curtain shop there are flowered fabrics hanging up in the section marked 'Floral Designs'. All the curtains in various colours but with no pattern on them are in the section marked 'Plain Fabrics'. Why are a pair of curtains with continuous vertical lines down them not in the section marked 'Striped Fabrics'?

CLUES

1. There was a section marked 'Striped Fabrics'.
2. They were vertical stripes.
3. They had not been misplaced in another section.
4. The customers knew where to find the curtains they needed.

See p. 252, answer 35

See p. 248, answer 135

WASHING DISHES

A couple in Leeds had six children and each night of the week one child would wash the dishes. This task was performed by a different child every night. On Sundays all the children would draw lots to see who would have the sad privilege. One child reasoned that it was best to be left the last lot and not pick at all. She calculated that the first pick would have a 1 : 5 choice, the next a 1 : 4 choice, the next 1 : 3, etc until she was left with the last lot. The child added all of the previous factors together and decided that it would be unlikely that it would be the worst lot left. Was this trick likely to work?

PUZZLE 79

A

B

C

D

E

Which of these cubes can be made from the above layout?

See p. 248, answer 128

On one early transatlantic flight in the 1930s a plane carrying 20 passengers had very low fuel reserves when approaching New York from England. It was a very windy day when the plane arrived, and it could not land where it was supposed to because of the wind. It was, however, able to land only a few miles away where the wind had a slightly higher speed. Why was this possible?

CLUES

1. The wind direction for landing at the second landing point was less favourable. It was more of a crosswind than the wind at the first landing point.
2. The first arrival area had no other vehicles on it and no other air traffic was involved.
3. Air traffic control did not advise of anything being wrong with the plane, and indeed nothing was wrong with the plane.
4. The plane was not diverted because of a low fuel situation.
5. The pilot could see why he should divert the plane.

DANGEROUS NEIGHBOURS?

The Price family were regarded by their neighbours in Peacefulton as complete undesirables. At least one of the family would always be terrorizing some neighbour. The neighbours were too frightened to speak to the police because of their fear of reprisals based on a long history of previous events. One day the situation escalated into a much more serious problem when one of the Price family set fire to a neighbour's home. The police questioned all of the neighbours, but even though some knew who did the deed they would not say. One neighbour handed a note to a policeman, and he went straight to the right member of the family. If the family names were Mr Tom

Price (father), Mrs Julie Price (mother),
and the children were James, David,
Mark and Billy, which family
member was arrested?

THE LAST TRAIN

A man went to the railway station to catch the 12:47 train. When he arrived, he realized that he was not wearing his watch. As he walked past the ticket machines, he saw a clock. The man then thought that he was an hour and a half early, so he walked away from the platform. A short while later, he realized his mistake when he missed the train. The clock was correct, so why did the man think he had been early?

CLUES

1. He did not ask anyone any questions.
2. He had not read anything about delays.
3. His train was on time and had not been re-scheduled.

THE UNLUCKY LOCKSMITH

A locksmith was called to an exclusive bank and asked to change the lock on a room that was used to store valuable documents. The door was to be activated only by the breaking of two low-power laser beams in front of the door. This would release a steel plate that covered the lock, and the owner could then use the new special key to open the lock. The system was to be automatic and re-set itself after use. Just before he had completed his clearing up, the manager of the bank wanted to check it out and after helping the locksmith to clear his tools from the storeroom, he was locked into the storeroom. The locksmith could not get him out. Why?

CLUES

1. The door had closed by accident or by design.
2. The police and fire department had to release the manager.
3. The locksmith had to change the lock again.
4. The locksmith still had the key but he could not make it work, even though he had tested it before clearing up.
5. The laser beams were only 3 feet apart.

THE GLASS HEAD

In recognition of the President's services to his country and for his contribution to world peace, a huge, two-ton polished glass head of his likeness was commissioned, the base of which was to be flat to ensure that it did not move on its plinth. The top of the plinth matched the neck of the glass head perfectly. An overhead crane with specially padded ropes was used to lift the head on to the plinth, but then a problem occurred. The two parts had to be positioned exactly, and the workers could not drag the ropes, since this would chip the head or base. How did they do it?

CLUES

1. They could not use wooden wedges or anything that might scratch the glass.
2. They could not use compressed air since the compressor did not have the power.
3. The ropes had to pass under the neck in 4 places.
4. The ropes were made of nylon, which covered a stainless steel core. They were 2 inches in diameter.
5. They could not use suckers or rubber props.

SURVIVAL OF THE WEAKEST?

Three men were passionately in love with a lady. The woman loved them all equally, but the passion boiled over and the men agreed that they should have a duel using pistols. To the victor, the hand of the lady; to the vanquished and defeated, death, injury, or disappointment.

After agreeing to duel, the odds were stacked against one and in favour of the other two. As Count Nevermiss was an expert and a perfect shot, he had won every duel even against better opposition than he was to face that fateful day. Lord Bullseye was a good shot and a military man. He could be relied on to hit his target two out of every three shots, while Captain Missalot could only be relied upon to hit his target once every three shots. They were, however, men of honour and decided that the rules of the duel gave the poorer shots a chance. They decided that they would stand and face each other from three points of a triangle. There was no limit to ammunition, but they would shoot in turn at either of the opponents with the worst shot going first and the best shot shooting last.

You are put in Captain Missalot's position. How do you maximize your chances of survival with honour? It is you who will shoot first. Who are you going to go for? Survival depends on good lateral and deductive reasoning.

THE PUZZLE KING OF EGYPT

Long ago in the days of the Pharaohs the Puzzle King was a highly favoured man – so much so that one of the Pharaohs allowed him to design the entrance to his tomb. The Pharaoh said that his tomb must not be plundered after his death so the design had to deter his people from trying to enter. He would also have 200 of his strongest soldiers entombed with him in case he revived and needed to be released. The design for the entrance is shown below. The magic cube would seal the entrance. How did the cube go together before it was moved into position in the pyramid so that the Pharaoh could get out?

CLUES

1. The cube was solid and made from stone. It was made in two halves as shown.
2. Dovetail joints were on the faces that you cannot see and are in central positions. The cube looks the same from each side view. Each side has the same dovetail joint showing.
3. 200 men could move half of the cube but they would not be able to move the entire cube. It took 400 men to move the cube into place.
4. No outside help was needed.
5. No hinges or tricks were employed.

TARGET PRACTICE

The twins Larry and Pete got up one morning and painted some large targets on the door of the barn. After the paint had dried, they found that their cricket ball damaged the door if they pitched a fastball. Their rubber and tennis balls were either lost or of no use because they did not leave a mark to show where they hit the targets. The twins, who were very competitive, did have a solution, one that also pleased their parents. They threw balls at the door for hours and could accurately score every shot without leaving a mess to be cleared away later and without damaging the paintwork. How was this possible?

CLUES

1. The balls had no dye and no mud.
2. The balls did not bounce.
3. The twins were told to clear the yard before they could play ball. This instruction was in their best interest.
4. The children kept clean.

SALLY'S WASH

Sally goes to the bathroom to have a wash. She wants to run a full basin of water so that she can get a nice lather on the soap, but unfortunately the plug for the basin has been lost. She cannot find another plug anywhere and cannot find anything else to fill the plughole. She knows, however, that while the water from the one tap will not stay in the basin, the water from the other tap will run away. Why is this?

CLUES

1. She does not jam the soap in the plughole.
2. The plughole can let out water more quickly than both taps on full.
3. A few days before and a few days later she could not have used this idea.
4. She had to run the other tap to clean the basin.

THE INHERITED HOUSE

Jamie did not know his uncle had left him Sea View House when he passed away. He knew that it was a mansion built about 200 metres back from the cliffs overlooking the sea. He had been there when he was a child, some 30 years ago. Jamie was not close to his uncle, but he was the last surviving relative. It had taken legal investigators some years to find Jamie, as he worked overseas. When he saw the mansion again, he was very disappointed. Why?

CLUES

1. It had been well maintained and was in good order.
2. No building had been placed between the house and the sea.
3. The gardens were still in good order.
4. The nearby town had prospered.
5. It was not sentimental disappointment.
6. His uncle had lived there until he died.

THE FIRE DRILL

At a school in Florida the fire bell sounded for a fire drill. The children and teachers were orderly and knew what to do. The children did not know that it was a practice session. The fire department, however, were needed because a major state of panic ensued. What occurred?

CLUES

1. The teachers and children could not exit the building.
2. The Fire Department knew of the fire drill but they were not required to be on site for the drill. They were, however, summoned.
3. Many lives could have been endangered by leaving the school building.
4. Fire was not involved.
5. Doors and windows were closed throughout the school.

A BODY BAG IN THE SUITCASE

Cheryl had just met a new boyfriend, Floyd. They met in Las Vegas and got married after a whirlwind romance. When they loaded up the car she looked into a suitcase that she had not packed, which had been left in the boot of the car by her new husband. It contained a bag with a boy's body in it. The suitcase had holes in it so that air could get in and the bag was partially open. She did not leave Floyd or report the incident to the police. Why?

CLUES

1. He told her that she had found his best friend.
2. The body bag was used for protection.
3. The boy was 7 years old.
4. It was not his son.
5. The body was fully dressed.
6. Foul play was not suspected even though an arm had been broken.

Can you find the odd shape out?

See p. 247, answer 108

CARDINAL LOCK'EMUP

The Cardinal was given the king's own writing desk for catching and locking up a musketeer who, it was alleged, had seduced the queen. The desk was magnificent, with thousands of inlays and studded with jewels. It had four crystal inkwells and a drawer for 20 quills. The Cardinal, who was the Minister for Justice, knew that the musketeer was not guilty, but it suited his plans to have him executed. On the day before the scheduled execution, three musketeers had an audience to plead with the Cardinal for leniency. The Cardinal would not listen so the musketeers made him listen at the end of a sword and made him write out a release paper, which is shown below.

CLUES

1. The musketeers saw the letter being written.
2. The format and seals for the letter were in order.
3. The Cardinal had not anticipated such a move and had not given special instructions to the Captain of Guards.
4. The king and queen did not know what was going on.
5. The musketeers did not have an arrest warrant out for them.
6. Antonio was the right musketeer and they went to the correct jail.
7. The Cardinal did not raise the alarm.

To The Captain of Guards

*I authorize the immediate release
of Musketeer Antonio.
He is innocent of the charges made
against him.*

Signed : Cardinal Lockemup

The letter was sealed using the Cardinal's seal, rolled up and sealed again. The Cardinal was asked to ensure that he would not be disturbed for two hours. He was then bound, gagged and locked in his room. The three musketeers then went to collect the other musketeer and were all arrested. Why?

THE BURGLAR

A burglar climbed into a house but made what was, for him, an unusually large amount of noise. He ran through the house and identified the owners' most precious treasures and ran out of the house with them. On exiting the house he found that the police were already waiting for him. The homeowners did not press charges and the police took the case no further. The neighbours, however, who had been awakened by the commotion, insisted that the man be arrested. What was going on?

CLUES

1. The house was alarmed.
2. The noise made by the burglar woke everyone in the house.
3. He had to get out of the house quickly.
4. He was planning to burgle the house.
5. The judge was lenient.

THE SAVAGE ATTACK

A man charged through a crowd of people and ripped off a pretty lady's blouse, punched her on the chest, and carried her away with him. The crowd were in shock and nobody tried to stop the man. Why not?

CLUES

1. He had never seen the lady before.
2. The police pursued him.
3. He was not armed and was not a physically strong person.
4. The police did not arrest him.

See p. 253, answer 53

PUZZLE 115

Here is another diagram in which we have supplied the letters you do NOT need to complete the puzzle! When you have decided which letters are missing rearrange them and you will find a city named after a US President.

Beware! One letter is used twice.

See p. 249, answer 166

PUZZLE 116

Can you find work out which number should replace the question mark?

See p. 243, answer 33

CHEAP SHOPPER!

A man on a low income wanted to save money on his supermarket bills. He was useful with a computer and understood how the supermarket system worked. After going to the supermarket he implemented his scheme. He had a full trolley of goods and was prepared to pay the price on the register for all of the goods, yet he was arrested. Why?

CLUES

1. The register asked for £120.25, which he offered to pay.
2. All of the goods bought were in tins, jars, or packets. He did not buy any fruit or vegetables.
3. He declared everything at the till and kept nothing in the trolley or on his person.

See p. 255, answer 94

PUZZLE 117

Can you work out the reasoning behind these squares and find the number that should replace the question mark?

See p. 247, answer 110

PUZZLE 118

Can you find the odd shape out?

See p. 249, answer 147

FATHER VS SON

Joe's son was very fit and worked out every day but he was not the brainiest of individuals. Joe had seen his youth come and go and he was now in his late 40s and not in good health. He felt that he could still beat his son even if he gave his son a small start. Joe's son, who would never throw a chance to beat his father, took up the challenge, but still lost. How?

CLUES

1. Joe was never any good as an athlete.
2. Joe never cheated and did not have any help.
3. It did not involve any motors or sails.
4. Joe's son did not let his father win deliberately.
5. The son had a 10-second start.

THE AWKWARD PIANO

Alf was a bit of a practical joker and his workmates would always be under attack from him. One day they had to move a piano and some other items up the stairs in a department store. Although the piano was heavy, they decided that they could still put a few things on top of it before they carried it up the stairs. Alf was going backwards and went up the stairs at the leading edge of the piano. Joe was at the bottom end and soon ran into a problem. Alf asked if he could hold the piano in place while he got help. Joe said, "Yes, but be quick." Alf rushed off and returned in under a minute pushing something into Joe's top pocket. "There," said Alf, "that should do it!" Joe was not amused. What had Alf done that he thought might have helped Joe so much? (Not!)

CLUES

1. He used a literal translation of a need for help.
2. It did not help Joe at all and the piano was stuck.
3. Nobody else helped.

See p. 255, answer 104

PUZZLE 120

Pick one letter from each bulb in order. You can make the names of five artists.

PUZZLE 121

Can you find the odd diagram out?

See p. 248, answer 124

THE FIRE

The couple had just finished building their house and because the night would be very cold, they wanted to build a fire to keep warm. The wind outside was gusting at 40 mph and they were soon very cosy and fell asleep. A few hours later they were both dead. What had gone wrong?

CLUES

1. The house had not burned down.
2. The house had not been blown down.
3. They had not suffocated.
4. They had not been burned to death.

IS THE DOCTOR WRONG?

A farm worker fell from his tractor and suffered bruising and what he thought might be a broken ankle. He was taken to the local hospital where the student doctor started to investigate his problems. Almost at once he shouted, "Cardiac arrest!" and revival equipment was rushed into the outpatients area. The diagnosis was correct and the farm worker went home in the next five hours. How could this be?

CLUES

1. The farm worker was alive when he went home and he was discharged by qualified staff.
2. The student doctor did everything correctly.
3. The consultant physician thanked the doctor for his prompt action.
4. Neither the broken ankle, nor the bruising, caused the cardiac arrest.

The phrase ARC DE TRIOMPHE is concealed somewhere in this grid. It occurs in its entirety only once. It is written in straight lines with only one change of direction. Can you find it?

See p. 244, answer 43

THE MASTER FORGER

The best forger of all time was indeed a most brilliant artist and a man respected and sought after in the criminal world. He was so good that every major intelligence force kept a watchful eye on him and anyone he came in contact with. They even bugged his home and workplace with microphones and cameras. This came in useful when he was asked to copy the new £50 note. The police were tipped off and decided to search his premises before he even got started. Why?

CLUES

1. It was not to see if he had any paper or ink.
2. It was not to see if he had any photographic equipment.
3. The search was successful.
4. The forger made perfect copies of the £50 note at a later date and was immediately arrested and jailed.

would continue this
sequence?

See p. 248, answer 130

GOLFERS

Two golfers had a challenge match. One scored 72 and the other scored 74. The player with the highest score won. How could this be, given the following clues?

CLUES

1. They played off the same handicap.
2. They had both scored correctly.
3. Neither player had incurred penalty shots and they followed the rules precisely.
4. The player with the lower score was not disqualified.
5. It was not a tournament where only the player scoring 74 was entered.

See p. 242, answer 22

AMAZEMENT

The child watched in total amazement as a man blew up a bank, killing three people. The child had a clear view of the whole event. The police did not need to question him. Why?

CLUES

1. The child was 12 years old.
2. The child told his parents what he had seen and they did not report it.
3. The family were not afraid of repercussions.
4. The man was not known to the child but he could describe the killer and all the events clearly.
5. The child was not one to lie.
6. The killer did not own up to the killing.

See p. 242, answer 3

THE ABANDONED

Charlie was abandoned at an early age and life had been a struggle, not just for him, but also for his adoptive parents. He killed his adoptive parents' offspring, yet they still worked hard to ensure he survived and had a home. As soon as Charlie was old enough he left his parents, never to return.

Neither the police nor the social services had anything to do with Charlie, even though he also killed his own offspring. Why?

CLUES

1. It had nothing to do with being underage when he killed.
2. His family had a reputation for punctuality.
3. His adoptive parents did not press charges even though the murders were brutal.
4. He never joined the military or had a social service number.
5. He was born in the spring.

See p. 245, answer 71

THE HOLIDAY DISASTER

Bill Drallam and his lifelong companion did not like the cold weather and often flew to warmer climes for a winter break. This year they decided that they would go with other friends in a larger group. They reached the airport and most of the group were killed, together with 30 people they had never met before. The survivors who suffered injury who were in their group were not taken to hospital, yet all of the other survivors with injuries were. Can you explain what occurred?

CLUES

1. Members from their group caused the problem.
2. They did not cause the problem deliberately.
3. No disease or virus was involved.
4. It was not a terrorist or hijack situation.
5. It had nothing to do with guns.
6. If they had not gone with the larger group the 30 strangers may have survived.

The word SERPENTINE is hidden somewhere in this grid. It occurs in its entirety only once. Can you find it? It may be spelt in any direction but is all in one line.

See p. 245, answer 59

THE TWINS CAUSE CONFUSION

A father always wanted four sons. His ancestors had always had large families and so he thought nothing about it. He was, however, upset in later life because he had only produced three sons. His eldest son was now 28 years old and he had given him a quarter of his land as his inheritance already. He had not passed other shares to his other sons before a wonderful event occurred: twins, and both boys! He immediately split the remaining land into four equally shaped parts, which were also equal in area, and gave each remaining child a share. How did he do this, given that he had divided the land awkwardly?

Pick one letter from each cloud in order. You should be able to make the names of five Roman emperors.

See p. 245, answer 63

HOW TO TRICK THE GENIE?

The king had a magic lamp that contained a genie. He also had a beautiful daughter who loved Aladdin, but the king did not like Aladdin and did not wish them to marry. He did not wish to upset his daughter, so one day he rubbed on the lamp and devised a plan with the genie. The king said he would call upon Aladdin and his daughter and seek a test of worthiness from the genie for Aladdin. They would all have to abide by the results. Aladdin was passing by when he heard the king and the genie planning the event. The genie said, "I will produce two envelopes for Aladdin to choose his fate. We will tell him that one contains the words 'Get Married' and the other will contain the words 'Banished Forever.' Aladdin must choose one envelope, but I will make sure that both envelopes have 'Banished Forever.'"

How did Aladdin trick the genie and the king?

See p. 251, answer 12

PUZZLE 162

Can you work out how many triangles there are in this diagram altogether?

See p. 246, answer 99

PUZZLE 163

The number of the quay and the ship's destination are in some way related. Can you work out which harbour the ship on Quay 26 is bound for?

- a) Bhaktal
- b) Kasaragood
- c) Cochin
- d) Lisbon

See p. 242, answer 4

CAR GRID

You are in a car that is parked and facing east on a straight road. You set off in the direction of the facing road and after some time driving you finish up 2.7 miles to the west of where you started. How?

CLUES

1. It is not a car with hovering capabilities.
2. It is not on a trailer or being towed.
3. You have not gone around the world.
4. You cannot turn the car around.

NOT SO SCIENTIFIC

What is it that you can see with the naked eye, seems to have no weight and yet the more of them you put into an empty container, the lighter the container becomes? Two answers are possible.

See p. 252, answer 30

PUZZLE 167

Can you find the shape that should replace the question mark in the last circle?

See p. 242, answer 8

PUZZLE 168

These trains pass three American towns on their route. Can you find the missing town of the last train?

- a) Baltimore
- b) Fresno
- c) Boston
- d) Philadelphia

See p. 243, answer 37

THE ARCTIC EXPLORERS

A man went into a seafood restaurant and ordered seal stew. After only a few mouthfuls he wrote a note to the police and then pulled out a gun and shot himself. Why?

CLUES

1. He was not an unhappy man and he had not thought about this action before going to the restaurant.
2. He chose seal stew because he had had to survive on this food for 14 days on a recent expedition.
3. His note told the police that he was committing suicide and giving the reason.
4. The reason given referred to his last expedition with two friends.

This grid follows a certain pattern. Can you work out which signs complete the missing grid?

See p. 245, answer 70

THE GRAVEL QUARRY

Big Al and Little Joe had just robbed a jeweller's but the police were not far behind them. Their escape route went near an abandoned gravel quarry where Little Joe had worked when the quarry was open. They stopped and dropped the bag containing the jewels over the edge of the rim and saw where it landed. Just to make sure it was well hidden, they threw some dry sand over the bag where it had landed. After 20 seconds they looked over the edge and they could not see the bag, and the sand blended with the damp sandy surface below. Two miles further on the police arrested the men and later had to release them for lack of evidence. Big Al killed Little Joe the next day and got away with the murder. What were the circumstances?

CLUES

1. Neither of them had told the police where to find the jewels.
2. No animal, bird or person moved the jewels.
3. The jewels had gone from the spot where they were stacked.
4. Big Al did not take the jewels in the night and he did not suspect Little Joe of taking the jewels. Little Joe did not suspect Big Al of removing the jewels.
5. They remembered the correct spot exactly.
6. A warning sign had been placed so that it could not be seen from above.

PUZZLE 171

6	8	9	4	6	2	9	6
86	38	64	?				
6	4	7	5	5	8	1	8

Can you work out the reasoning behind these squares and replace the question mark with a number?

See p. 245, answer 72

THE SILENCE

"Hello," said Henry, as he gave his girlfriend a peck on the cheek. He then asked, "Where's dinner?" After a few moments he said, "Your dad couldn't say that". He was right, but do you know why?

CLUES

1. Her father was alive and in good health, and there was nothing wrong with his mind or voice.
2. He was born and raised in the same country as all of his offspring.
3. They still lived together and communicated every day.
4. The father was not angry with Henry.

WORLD OUTSIDE

Fred was often inquisitive about the world outside. Each day he gazed wistfully through the glass at a world he could never know. Then, one day, the unthinkable happened. Some boys playing outside accidentally broke the glass. Instantly Fred regretted his curiosity.

Why?

See p. 254, answer 69

PUZZLE 173

Take one letter from each cloud in order. You should be able to make the names of five playwrights.

See p. 243, answer 25

LITTLE ANNIE

It was just after Christmas when Little Annie went to the village shop to buy some sweets and a few things for her mother. "That will be £10.50, Annie," said the shopkeeper. Annie handed over a £10 note and a £5 note, and waited for her goods and change.

"I can't give you the goods or change until your mother comes in, Annie," the shopkeeper explained in a very friendly tone. Why?

CLUES

1. She had not purchased any tobacco, perfume, alcohol products, or anything where her age required her to be older.
2. Her mother would not have been upset with her even though she had not asked her to go to the shop.
3. She often ran to the shop for her mother for small items and was always partial to a few sweets for her trouble.
4. She was an honest child.

See p. 255, answer 102

PUZZLE 174

A

B

C

D

E

Can you find the odd shape out?

See p. 248, answer 133

THE MAGICIAN

The magician's table is smoking with carbon dioxide gas, produced from dry ice in water. The mystery increases as he taps a smoking metal ball with his wand and places it in a wooden box, which is just big enough to enclose it. The box is placed on a tray for all to see and a few moments later the ball is gone. What was the scientific explanation for this?

CLUES

1. It was a solid metal ball.
2. A small hole at the bottom of the box existed.
3. The ball was 30 times too big to go through the hole.
4. The box was hot.

See p. 251, answer 14

ANSWERS

PUZZLE ANSWERS

Answer 1

C. Dickens. The code is based on the number alphabet reversed, i.e. Z = 1, A = 26, etc.

Answer 2

C.

Answer 3

20. Multiply hours by minutes and divide by 3 to get the number of the rider.

Answer 4

D. Multiply digits. The resulting product gives the alphabetical position of the first letter of the place name.

Answer 5

9.05. The minute hand goes forward 25 minutes, the hour hand back by 5 hours.

Answer 6

C. Divide the left number by 2, place this number at the apex, then square it and put this number at the right. Finally, add all three numbers together and put the sum as a roman numeral in the middle. In triangle C, the right number should be 4 and the middle number should be X.

Answer 7

Carmen, Fidelio, La Traviata, Lohengrin, Boris Godunov. The additional opera is Don Giovanni.

Answer 8

The symbols are determined by the number of sides, as follows: circle 1, L-shape 2, triangle 3, square 4, pentagon 5, hexagon 6. Starting at 1 and moving in a clockwise direction skip 1 shape, then 2, repeat. When you have reached the 8th segment continue with the 1st segment in the 2nd circle, and continue in the same order in this and the subsequent circle.

Answer 9

It starts at the top left and works inward in an anti-clockwise spiral.

Answer 10

384. Starting at the top right hand corner work through the square in a vertical boustrophedon, multiplying by 4 and dividing by 2 alternately.

Answer 11

D. They are all in alphabetical order except for D.

Answer 12

It starts at the top left and works inward in an anti-clockwise spiral.

Answer 13

18. Multiply the numbers in the outer section, reverse the product and put in the middle of the next section.

Answer 14

T. Based on the number alphabet backwards (Z=1, A=26 etc.), add together two consecutive squares in the same row. Convert the sum to a new letter and put in the row above in the square that is directly above the two consecutive squares.

Answer 15

No. 2. Take the first digit of the weight from the second to arrive at new number.

Answer 16

3.13. Start time A minus Finish A = Finish B. Start time B minus Finish B = Finish C, etc.

Answer 17

142334. It works on a number code. 1 is letters A–E inclusive, 2 F–J, 3 K–O, 4 P–T, 5 U–Y and 6 Z.

Answer 18

Denver, Buffalo, Houston, Boston, Seattle, Miami. The extra city is Philadelphia.

Answer 19

Blake, Byron, Dante, Donne, Plath.

Answer 20

G. It is a term for tempo, while the others are types of dance.

Answer 21

Ratatouille. It is the only vegetarian dish.

Answer 22

The symbols are the same in opposite segments.

Answer 23

48. In each box of four numbers, multiply the top two numbers, put the product in the bottom right box, then subtract the top right number from the bottom right one and put the difference in the bottom left box.

Answer 24

C. Take the first digit from the second. The resulting digit gives the alphabetic number of the initial letter of the answer.

PUZZLE ANSWERS

Answer 25

Brecht, Coward, Dryden, Pinter, Racine.

Answer 26

21. $\Delta = 12$, $* = 9$, $\boxtimes = 3$, $\% = 5$, $@ = 7$.

Answer 27

76. Starting at the bottom left hand corner, work through the square in a clockwise spiral, multiplying by 2 and subtracting 6, alternately.

Answer 28

Bacon, Bosch, Klimt, Manet, Monet.

Answer 29

72. Add the two numbers in each bar, multiply the digits of that sum and put the product three squares ahead

Answer 30

Camus, Defoe, Dumas, Verne, Wells.

Answer 31

G. Starting at the bottom left corner, work through the alphabet in an anti-clockwise spiral. Miss 1 letter, then 2 letters, 1 letter, etc., going back to the start of the alphabet after reaching Z.

Answer 32

92. Multiply the numbers on the diagonally opposite corners of each square and add the products. Put the sum in the third square along.

Answer 33

44. The numbers increase clockwise first missing one spoke, then two at the fourth step. Each circle increases by a different amount (2, 3, 4).

Answer 34

1956. The numbers represent the leap years clockwise around the triangles starting at the apex. Miss one leap year each time.

Answer 35

Tiramisu. This is a dessert; the others are all main courses.

Answer 36

Add the number of segments in column 1 to the number of segments in column 3. Draw this number of segments in to column 2.

Answer 37

Fresno. Skip two letters in the alphabet each time.

Answer 38

15. Take the minutes in the hours, add the minutes and divide by 10. Ignore the remainder.

Answer 39

987. The tractor number is divided into the weight to give the acreage. The weights have been mixed up.

Answer 40

Kebab, Pasta, Pizza, Tacos, Wurst.

Answer 41

Bartok, Boulez, Chopin, Delius, Mahler.

Answer 42

The faces pattern sequence is smiley, smiley, straight, sad, sad, smiley, straight, straight, sad, etc. Start at the bottom left and work in a horizontal boustrophedon.

Answer 43 – See p. 244

Answer 44

The symbol turns 180° clockwise, 135° anti-clockwise, 90° clockwise, 45° anti-clockwise.

Answer 45

Heart = 8, Diamond = 4, Club = 6, Spade = 2.

Answer 46

Idaho, Iowa, Maine, Texas, Utah. The dummy letters are K and L.

Answer 47

C. Add the digits to get the alphabetic number of the town's initial letter.

Answer 48

Sky Fly. The name contains no vowels.

Answer 49

C. The others are all in the correct order if you start from Earth and travel away from the Sun.

Answer 50

Bodega, Bonsai, Ersatz, Hombre, Kitsch.

3	3	2
2	3	4
3	2	1

Answer 51

The pattern sequence is 1, 2, 2, 3, 4, 4, 1, 2, 3, 3, 4. Start at the top left and work in a horizontal boustrophedon.

PUZZLE ANSWERS

Answer 43

Answer 52

The pattern is +2 scales, +3 scales, -1 scale. A fish with an even number of scales faces the other way.

Answer 53

The pattern is +1 limb, +2, +3, -2, -1, +1, +2, +3, etc. A figure with an uneven number of limbs is turned upside down.

Answer 54

Starting at opposite ends alternately take 1 and 2 steps to the other end of the grid in a boustrophedon.

Answer 55

Starting with a vertical line reflect the dot first against that line and then each following line in a clockwise direction.

Answer 56

23.

Answer 57

The corresponding sections in each wheel should contain a black section in each compartment.

Answer 58

Brunel, Darwin, Edison, Pascal, Planck.

Answer 59 – See p. 245

Answer 60

D. All the others are cities, Kansas is a state (Kansas City actually straddles the Missouri-Kansas border).

Answer 61

61. Letters are worth the value based on alphabetical position (A=1, etc.). However, alternate letters are worth the value based on the reversed alphabet (A=26, etc.).

Answer 62

C. Starting at the top right hand corner, work through the alphabet, missing 1, 2, 3, 4, 5, 4, 3, 2, 1, 2, etc. letters each time, in a vertical boustrophedon.

PUZZLE ANSWERS

Answer 63

Gallus, Jovian, Julian, Trajan, Valens.

Answer 64

M. These are all the letters with straight sides only.

Answer 65

64. Take each digit individually. The pattern is 1, 2, 3, 1, then 2, 3, 4, 2, then 3, 4, 5, 3, and finally 4, 5, 6, 4.

Answer 66

18. These are all the numbers that can be divided by either 3 or 4.

Answer 67

B. The digits of all the others add up to 6.

Answer 68

1980. Each vowel is worth 243, each consonant 126.

Answer 69

576. Multiply No. by speed, put the product as the distance for the next balloon.

Answer 70

The pattern is:

++---÷÷XXXX

Start at the top left and work clockwise in an inward spiral.

Answer 71

6. In each square, multiply the top and bottom left together, then multiply the top and bottom right. Subtract this second product from the first and put this number in the middle.

Answer 72

75. In each square, multiply the top and bottom left numbers, then the top and bottom right. Add these two products, reverse the digits of this sum and place it in the middle.

Answer 73

C. Divide the left number by 2, place this number at the apex, then square it and put this number at the right. Finally, add all three numbers together and put the sum as a roman numeral in the middle. In triangle C, the right number should be 4 and the middle number should be X.

Answer 74

B. In each square multiply the two top numbers, then the two bottom ones. Subtract the latter product from the former, translate the difference into Roman numerals and put it in the middle. Square B should be XX (20).

Answer 75

R. Starting on the top left hand corner, work through the alphabet, missing a letter each time, in a vertical boustrophedon.

PUZZLE ANSWERS

Answer 76

17.

Answer 77

JOL 1714. Go 5 forward and 3 back in the alphabet. The numbers continue from the alphabetic position of the letter.

Answer 78

35226252257. The numbers are in code from the newspaper titles. A—C = 1, D—F = 2, G—I = 3, J—L = 4, M—O = 5, P—R = 6 S—U = 7, V—X = 8, Y—Z = 9.

Answer 79

No. 52. Add together the value of the letters based on their alphabet position.

Answer 80

29. Add together the corner squares of each row or column in a clockwise direction. Put the sum in the middle of the next row or column.

Answer 81

F. This is based on the number alphabet backwards. Add together the corner squares of each row or column and put the sum in the middle square of the opposite row or column.

Answer 82

58. Add the digits of the last number and move on by that number.

Answer 83

D. Reflect the shape along a horizontal line, then move each sign one segment clockwise.

Answer 84

QUS 2321. Go forward by 4 and back by 2 in the alphabet, then continue with numbers taken from the letters' alphabetical position.

Answer 85

No 201. Add together the values of the letters based on their reversed alphabetical position, (A = 26, Z = 1).

Answer 86

E. The shape has been folded along a horizontal line. A shaded piece covers an unshaded one.

Answer 87

Picasso. Based on the letters' position in the alphabet, 3 has been added to each value.

Answer 88

G. Add 3 to odd numbers, subtract 2 from even numbers.

Answer 89

E. The outer shape changes to the inner shape, the openings rotate through 90° clockwise.

Answer 90

84. Multiply the hours of A by the minutes of B to get the tonnage of C, then B hours by C minutes to get D, C hours by D minutes to get E, D hours by E minutes to get A, and E hours by A minutes to get the tonnage of B.

Answer 91

I. It is based on the number alphabet backwards. Add the top and bottom rows together and put the sum in the middle.

Answer 92

It should have two dots. Add together the corner squares of each row or column and put the sum in the middle square of the opposite row or column.

Answer 93

E. Based on the position of the letters in the alphabet, multiply column one by column three and place the product in the middle column.

Answer 94

D. Add consecutive clockwise corners of the diamond and place the sum on the corresponding second corner. Add the four numbers together and place the sum in the middle.

Answer 95

Add one leaf. Add two petals. Deduct 1 petal and add 1 leaf. Repeat.

Answer 96

Renoir. The letters in this code come one before in the alphabet, with the artist's name reversed.

Answer 97

16.

Answer 98 – See p. 247

Answer 99

39.

Answer 100

10. Add 2 to each value, place sum in corresponding position in next triangle, then subtract 3, add 2 again.

PUZZLE ANSWERS

Answer 98

@	%	*
@	%	*
@	@	%

Answer 101

The pattern sequence is @, @, %, *, %, &, &, %, %. It starts at the top right and works inwards in an anti-clockwise spiral.

Answer 107

E. Each shape is divided into smaller ones by alternating between adding horizontal and vertical lines (or vice versa) except in 'E' where 2 vertical lines are added in succession.

Answer 108

E. All elements consist of 3 straight lines except 'E' which consists of 4 straight lines.

Answer 102

Degas. Each letter is the same number of letters from the end of the alphabet as the letter in the artist's name is from the beginning.

Answer 103

J. All of the others have a matching partner.

Answer 104

D. Alternate between rotating the pattern 90° anti-clockwise, and swapping direction of each individual arrow.

Answer 105

A. Each ring contains one cross more than the previous example, and the first and last cross in each adjacent circle are level.

Answer 106

G. The top and bottom elements swap position, the smaller central element becomes smaller still and all three elements move inside the larger central shape.

Answer 109

C. Convert each letter to its value based on its position in the alphabet. The values on each corner of a triangle added together result in the new letter in the middle.

Answer 110

9. The numbers rotate clockwise and increase by 1 each time.

Answer 111

12. Add together the values in the same segments in wheels A and C and put the answer in the opposite segment in wheel B.

Answer 112

G. The figures are vertical images of each other but with shaded and unshaded elements becoming unshaded and shaded respectively.

Answer 113

B. Each arch moves closer to its opposite end by an equal amount each time.

PUZZLE ANSWERS

Answer 114

B.

U	W	W
Z	W	W
T	T	U

Answer 115

The pattern sequence is:

Z R T T U W W Z Z S

Start at the bottom right and work up in a horizontal boustrophedon.

Answer 116

B.

Answer 117

F. A curve turns into a straight line and a straight line into a curve.

Answer 118

A.

Answer 119

V. The letters are based on the number alphabet backwards (Z = 1, A = 26, etc.). The values on the bottom corners and the value in the middle added together result in the value on the apex.

Answer 120

3. The numbers rotate anti-clockwise from one square to the next and decrease by 2 each time.

Answer 121

9. Multiply the values in the same segments in wheels 2 and 3 and put the answer in the next segment in wheel 1, going clockwise.

Answer 122

N. Going from the top to the bottom of one domino piece, move on five letters.

Answer 123

T. Hardy. Each letter in this code follows that of the author, e.g. 'U' comes after 'T' in the alphabet.

Answer 124

C. The number of small circles equals the number of edges of the shape, except for 'C' where there is one more circle than edges.

Answer 125

E. All the others consist of 3 consecutive letters in the alphabet.

Answer 126

B. Deduct one dot and one line, add two dots and two lines, repeat.

Answer 127

E. All the others contain two stars for every half moon.

Answer 128

C.

Answer 129

The shaded square moves around the square in a horizontal boustrophedon, starting at the top left hand corner. It advances by 2 squares, then 3, then 4, etc.

Answer 130

D. Each column of elements alternates and moves up two rows.

Answer 131

J. Austen. Each number is double the letter's alphabetical position.

Answer 132

E. All the other elements consist of 3 consecutive numbers.

Answer 133

D. The circle in all other elements intercepts an edge in both the small and large shape outline.

Answer 134

A. Each small bar moves one place anti-clockwise in alternate shapes, so that they are either 90° or 180° apart.

Answer 135

4	2	2
1	5	5
7	1	1

The pattern sequence is

7, 1, 1, 3, 2, 2, 5, 5, 4, 1.

It starts at the top right and works in an anti-clockwise spiral.

Answer 136

$+\div-x-+$. The letters are based on their alphabetic position, so the sum would read:

$L(12) + D(4) \div B(2) - F(6) \times K(11) - Q(17)$

$+ C(3) = H(8).$

Answer 137

8. The sum of hands on each clock is 13.

Answer 138

13.

Answer 139

Independence. The initials can be rearranged to form the name Madrid.

Answer 140

B. It is the only figure that does not have three boxes in one row.

PUZZLE ANSWERS

Answer 141

B. Working in an anti-clockwise spiral pattern, in the first square there are eight lines, one missing, seven lines, one missing, etc. The number of lines before the first break decreases by one with each square.

Answer 142

7. Add the three numbers on the outside of each square (A). Add the digits of the sum (B). Divide A by B and place in the small square.

Answer 143

Start at the top right and move across the square in a horizontal boustrophedon. The pattern is: miss 1 square, turn by 180°, turn by 90° clockwise, miss 1, turn by 90° clockwise, turn by 180°.

Answer 144

4.

Answer 145

B. It is the only figure which, with an additional line, has a triangle adjoining the rectangle which overlaps the square.

Answer 146

F. The small and large elements become large and small respectively.

Answer 147

A. It is the only one to have an odd number of sides.

Answer 148

D. It is the only one to which a circle can be added where the triangle overlaps the circle and a right angled line runs parallel to the whole of one side of the triangle.

Answer 149

B.

Answer 150

58. Add the digits of the last number and move on by that number.

Answer 151

21. Multiply each number by the number on the opposite side of the wheel on the same side of the spoke and put the product in that segment next to the centre.

Answer 152

2.

Answer 153

C. It is the only one to have an odd number of one element.

Answer 154

D. A circle becomes a square, a line a circle and a square a line, all in the same size and position as original.

Answer 155

D. All the others are symmetrical.

Answer 156

F. The circles and squares become squares and circles respectively. The largest element loses all internal elements.

Answer 157

No. She hates capital cities.

Answer 158

No. Illinois had an S in it.

Answer 159

Yes. Swansea had no O in it.

Answer 160

The symbol turns 180° clockwise, 135° anti-clockwise, 90° clockwise, 45° anti-clockwise.

Answer 161

E. Add two circles and two lines, take away one of each, repeat. The pattern is also rotated by 90° anticlockwise each time.

Answer 162

Forward, back, forward, back.

Answer 163

D.

Answer 164

The pattern sequence is: 1.00, 2.00, 2.00, 1.00, 3.00, 3.00, 2.00, 4.00, 4.00, 3.00, 5.00, 5.00, 4.00, 6.00. Starting at the bottom left work upwards in a vertical boustrophedon.

Answer 165

E.

Answer 166

Washington.

Answer 167

C.

Answer 168

D and E.

Answer 169

B. It consists of 14 straight lines, the rest of 13.

Answer 170

C. It is the only one which does not have half as many 'step' lines as there are triangles.

Answer 171

Pantagruel.

PUZZLE ANSWERS

Answer 172

Frankenstein.

Answer 173

E. A square becomes a circle, a circle a triangle and a triangle a square of similar proportions and positions.

Answer 174

B.

Answer 175

A. Each shape increases by one of the same until there are three and it then becomes one. The image is reflected after a shape with two elements.

Answer 176

Excalibur.

Answer 177

Nostradamus.

Answer 178

H. Longer rectangles and arrows swap shading. Smaller rectangles and arrows interchange shape and shading. The pattern is then flipped vertically.

Answer 179

B. It is the only one with the same number of vertical and horizontal lines.

Answer 180

E. The two next letters in the alphabet, following the first example, facing the correct direction, run into each other.

Answer 181

D.

Answer 182

The pattern sequence is as follows.

Start at the bottom left and work in a clockwise spiral.

Answer 183

B. Based on the number alphabet backwards, add the values of the two letters on the outer edge of each segment and place the sum into the opposite segment on the inside.

Answer 184

$$-x + - \div +. 9 - 3 \times 4 + 19 - 8 \div 5 + 4 = 11.$$

Answer 185

B. The others all have an equal number of straight lines and curves.

Answer 186

F. Circles and rectangles interchange except for strings of 3 circles which disappear.

Answer 187

Back, back, forward, back.

LOGIC ANSWERS

1. Racetrack Confusion

It was his mother in car 3.

2. Uneasy Peace

The McPhersons were given the numbers :- 5, 6, 7, 8, 9, 12, 16, 18, 19, 22, 23, 24, 26, 27 & 30. If the count started at number 1 all of the McPhersons had to jump overboard.

3. Sally's Wash

The pipe to the basin has frozen so the plughole was also frozen, Therefore, as long as Sally did not run the hot tap, the water would stay in the basin.

4. Amazement

The child saw it on a TV movie.

5. The Rejected Recruit

He was trained as a sharpshooter or sniper. His type of colour-blindness allowed him to pick out other snipers wearing camouflage quite easily. He was therefore a very important member of his unit since he could see the enemy and get in the first shot. (This technique has been employed especially in jungle warfare.)

6. Nylon Ball-Bearings

He fell into a storage compartment and sank to the bottom. He eventually ran out of air.

7. The Disappearing Man

He had melted; he was a snowman.

8. Head-On Ant Crash?

They agreed not to go on the rod at the same time.

9. The Millionaire's Inheritance

Only if they can express the number to base 9, which gives \$7,000,000 or \$1,000,000 each.

10. The Policewoman

It was her husband breaking into their own house after they had locked the keys inside.

11. The Abandoned

Charlie was a cuckoo. The punctuality clue refers to a cuckoo clock.

12. How to Trick the Genie?

Aladdin chose one envelope, and without opening it, tore it up into lots of pieces, and asked the King to read what option he had rejected in the other envelope.

13. The Musical End

The music and lighting were on the same circuit. The emergency and life-support systems were on another circuit. It was nighttime and when the music stopped the lights went off. In the confusion, one of the visitors accidentally disconnected some vital equipment and Grandpa died.

14. The Magician

The ball was made from frozen mercury, which melted and went

through the hole in the base to a glass container. The box was left dry inside.

15. The Arctic Explorers

The three on the expedition were cut off by bad weather and had no emergency supplies. His best friend and his other colleague went for food. Only the colleague returned. For 14 days his colleague had told him that they had been eating seal stew. When he tasted seal stew in the restaurant, he realized that he had eaten his best friend.

16. Sinking Robots

The mass of the planet was much greater, although its size was the same. This meant that its gravitational forces were 10 times greater, the effect of which meant that the robots weighed 10 times what they would have done on ZOD. This caused them to sink to a level where they would not function.

17. Big Bill

Big Bill was a lighthouse keeper who had stayed awake the previous night to keep the light working in the worst part of the storm. The alarm bell on the buoy had been smashed on the rocks and no longer gave an audible warning. The lighthouse light was switched off in error and, as a result, a ship crashed on the rocks.

18. A Problem for the Ferryman

Nine trips are required. Label the children A,B,C,D, and E in ascending age, and the sides of the river "Near" and "Far" to create the table below:

<i>Trip No.</i>	<i>Near Side</i>	<i>Children in boat</i>	<i>Far Side</i>
1.	A,C,E	B,D	None
2.	A,C,E	B	D
3.	B,E	A,C	D
4.	B,E	A,D	C
5.	B,D	A,E	C
6.	B,D	C,E	A
7.	B,D	C,E	A
8.	B,D	None	A,C,E
9.	None	B,D	A,C,E

Each child has had 3 one-way trips.

19. Brother Simon

Brother Simon is a ghost and passes through the walls.

20. The Class

James is a teacher.

21. Another Mansion Murder

Abbie.

22. Triangles

11. See image.

LOGIC ANSWERS

23. The Courier's Wait

He was on a boat and had to wait for the next high tide to get into the unloading dock.

24. The Removal Men

The removal man took the stolen stamps to the biggest stamp dealer in the city, who recognized that they were stolen from his shop some years before. He called the police, who arrested both the homeowner and the removal man.

25. Hold-up Clues

The customer had hiccups. The fright of seeing the masked gunman did the same job as the water would have.

26. Little Breeders

They were all female birds.

27. The Immovable Screw

He was using a two-way screw driver, which had a clutch action. It had last been used to put a screw into a panel by turning the screw clockwise. The reversible switch to engage the screwdriver for undoing screws had not been altered.

28. Levitating Balloons?

They had left the bath running, which overflowed through the ceiling. The draught excluders prevented the water from escaping and the water level in the room was 2 inches deep.

29. Washing Dishes

The odds of the deciding lot would be the same for each round, and over time that child (unless unlucky) would be required to wash dishes on a Sunday as many times as each of the other children.

30. Not So Scientific

Holes or beams of light.

31. Mad Driver?

He saw someone cutting across from the opposite side of the road and they were spinning out of control and heading straight for him. He was boxed in, and rather than take a head-on impact, which might have killed both drivers, he took a minor bump on the car in front of him.

32. Target Practice

It had snowed overnight so they cleared the yard and made snowballs, which stuck to the barn and melted away afterwards.

33. The Burglar

The burglar had just burgled the house next door when he noticed that the neighbouring house was on fire. He immediately entered the building to raise the alarm. Checking the rooms, he found two children overcome by smoke and took them to safety. The neighbours saw what had gone missing, and it was still in the burglar's hand when they called the police.

34. The Deadwood Stagecoach

He was so fast asleep when the coach left that nobody could wake him up.

35. The Fabric Shop

The curtains also have horizontal lines, so they are checked.

36. Antony & Cleopatra

They were both pet fish and the tank that housed them had a crack; all the water had leaked away.

37. Moving Suitcases

A violent tornado had ripped through their apartment and carried the contents over a few miles. A kind lady found the cases in her garden; because the address labels had not been filled in, she decided to place them at the side of the road so that the owners might see them if they drove past. Because of the damage a few miles away, the police were busy helping the homeless and rescue services. That was the reason for not passing the property on to the police.

38. High Days and Holidays

Saturday, Wednesday, Thursday, Tuesday, Sunday, Monday & Friday (in descending alphabetical order after the high day).

39. Disappearing Treat

The bag contained candyfloss. Rain got into the hole in the top of the bag, and the candy dissolved into a small amount of pink liquid.

40. A-Haunting We Will Go!

Take the room number at present multiplied by the number of days between the sightings, and then subtract the number of days between sightings. The number of days between sightings increases by one for each period. The next sighting will be $(9 \times 4) - 4 = 32$, thus Room 32 every fifth night.

41. Amateur Safe-crackers

Like the expression from the firing of flintlock rifles "a flash in the pan," they had not compacted the powder or kept it in a container to cause an explosion. It therefore ignited like the powder in the "pan" of a flintlock rifle and just went up in a flash and a great cloud of smoke. In older times the "charge" of powder was compacted inside the barrel of the rifle. A small charge of loose powder was placed in a small bowl where the flint's spark would ignite the powder in the pan, which then lit the compressed powder in the barrel through a small hole. Once ignited, the compacted powder would cause the bang and the shot to be fired.

LOGIC ANSWERS

42. Survival of the Weakest?

Your first shot should go behind you or deliberately in the air. You can't shoot at Count Nevermiss because if you did and were unlucky enough to hit him, Lord Bullseye would polish you off with the next shot or two. If you shoot at Lord Bullseye and hit, Count Nevermiss will certainly get you. If you miss Lord Bullseye, Count Nevermiss would not and his chances against you are 2 : 1 in his favour. If you hit Count Nevermiss, Lord Bullseye's probability of winning against you is 6/7, yours is 1/7. But if you deliberately miss, you will have another shot against either one of the other two. If Lord Bullseye hits the Count, you will have a 3/7 probability. With 1/3 probability, the Lord will miss the Count (in which case the Count will dispose of the Lord). Thus your chances are 1/3 against the Count. The odds are increased by shooting in the air: your chances of surviving the duel will be 25/63 (about 40%). Lord Bullseye's odds become 8/21 (38%); Count Nevermiss's odds are 2/9 (22%).

43. The Fire

They were explorers who had built an igloo. The fire was too big and melted the walls when they fell asleep. They both suffered extreme hypothermia and died.

44. Happy New Year and Again etc.

She was an astronaut, who on one occasion was in a stationary orbit over the Greenwich Date Line. As each time zone revolved below her, she celebrated the New Year 24 times. The other times occurred while she flew from east to west, passing through three date lines when it was midnight on the ground.

45. The Strong Swimmer

A break in the seabed released large quantities of trapped air as small bubbles. This reduced the density of the water so that it was lower than the density of a human body and he sank.

46. Recovering with a Letter

A piece of paper with the letter 'A' on it. The instructions said, "If you add 'A' to 'her', you will have 'hear'."

47. The Casino

They were a band who played background music for the guests. They were paid by the casino and did not gamble.

48. Charged by a Bull

One of the family named BULL who owns the nearby farm charged them £20 to cross his land.

49. Don't Jump to Conclusions

He was a priest whose birth had been in the presence of his father.

50. Leap to Safety

His house is built into a hill/ the house is built below ground level.

51. The Aircraft

It was the earliest days of commercial jet aircraft flight and a few unexplained accidents involving the Comet needed to be investigated. The Comet was the first commercial transatlantic passenger jet. It flew higher and faster than all other commercial planes, and was therefore subjected to stresses that other planes had not endured. The main problems came when the pressures in the fuselage were greater than those outside. The design engineers found that this was best simulated by putting water in the fuselage under pressure. This identified a number of weaknesses in the design, especially around the windows. The findings have made all jet travel much safer.

52. In the Dirt

One child fell on his feet, and his face was not covered with dust to make his face dirty. When he saw his friend's face covered in dust, he thought his own must also be dirty; his friend only saw his friend's clean face. The dirty child did not think that he needed to wash.

53. The Savage Attack

The lady was in a shopping mall and suffered a heart attack. Her heart had just stopped. The man who came to the woman's aid was a doctor just passing by. He started her heart, put her into his car, and drove straight to a nearby hospital with a police escort. The police were initially a little slow, and had to pursue him before clearing a way for him.

54. The Broken Vase

The two vases were the only surviving example of work by a famous potter. The man already owned one and by smashing the other he ensured his vase would be unique.

55. Racetrack Joe

His bet was for a race two weeks earlier when the horse came in last. The newspaper gave the previous day's results when the horse had won.

56. The Tea Party

The little girl was in her playhouse. She had to go through the front door of the playhouse first, and then the front door of the family house to get to the front garden.

57. 1930s

It was a seaplane. The water that it was to use at the first landing site was too rough for a safe landing so the pilot diverted to an airfield on land.

58. The Master Forger

They wanted to substitute the £50 note in his flat with a £50 note with a flaw in it. This flaw was unique to that note only, and when more of them hit the streets it could be traced back to him alone.

LOGIC ANSWERS

59. The Jealous Husbands

Men = ABC Women = abc

Near Bank	Boat	Opposite Bank
ACac	Bb	None
ACac	B	b
ABC	ac	b
ABC	a	bc
Aa	BC	bc
Aa	Bb	Cc
ab	AB	Cc
ab	c	ABC
b	ac	ABC
b	B	ACac
None	Bb	ACac

60. The Gravel Quarry

The jewels were thrown on to quicksand. Little Joe had forgotten about it, but Big Al made him try to get the jewels. Little Joe tried and sank without trace. The police did not even know that Little Joe was dead.

61. Cardinal Lock'emup

One of the inkwells had disappearing ink. When the Captain of Guards saw nothing except the seals, he arrested the musketeers until he could speak to the Cardinal.

62. The Cup of Coffee

He had put sugar in the first cup.

63. The Messy Eater

He brings tinned fruit or pre-prepared fruit.

64. The Arabian Prince's Car

The clear plastic sucker that attached the air freshener to the front windscreen was shaped like a lens and focused the sun's rays like a magnifying glass on to the newspaper. The paper caught fire, causing the damage.

65. Lost at Sea

He was captain of a river boat ferry. The globe he went round was a decorative one he had in his cabin.

66. The Puzzle King of Egypt

The cube has two diagonal dovetail slots. The top can be pushed off by pushing at 45 degrees to the face.

67. Lottery Winners

\$330,000 (\$15,000 increments).

68. Arise

It was an undersea mountain, and natural buoyancy lifted him.

69. World Outside

He was a goldfish whose bowl got broken, with fatal results.

70. The Great Soccer Player Retires

He played the whole of the first half, and for 10 minutes of the second half for his club. He scored 2 goals for his club in the first half. He was then taken off the field of play, and invited to play for his country for the last 35 minutes, scoring twice more. The other deciding goal was an "own goal" not scored by him.

71. A Bargain

The land was being reclaimed from the sea for industrial use. His company owned the reclamation contract. The land would soon be worth a fortune.

72. Father vs Son

Joe beat him at a game of chess (or something similar).

73. Evolution

Animal X on island A was an ass. Animal Y on island B was a horse. Animal Z on island C was a donkey.

The new animal on island B was a MULE (ass/mare). The new animal on island C was a HINNEY (Donkey/Stallion).

74. The Last Train

The clock he saw was a reflection. It was showing 12:45, but this appeared to be 11:15 since the clock only had dashes on it rather than actual numbers.

75. The Bus Drivers

The two bus drivers are married; one is the boy's mother and the other is his father.

76. King-Elect

Only the less bright child was a male.

77. The Bath of Liquid

He fell into a storage bath containing mercury. He was taken to hospital to be decontaminated because mercury can cause health problems. At room temperature mercury does not leave the skin feeling wet.

78. Confusion & Lies

If you say the child was a boy then the second speaker must have been the mother, whose first statement must have been true and whose second statement was a lie. But boys in the family do not lie so this option is no good. If you say that the child was a girl and if the first speaker was the father, then the second speaker was the mother whose first statement would be a lie and whose second statement was true. In that case the child would have spoken the truth and would have said, "I am a girl". But this implies that the first speaker lied, but males cannot lie. This option is therefore no good. So by deduction the first speaker was the mother and the child said, "I am a boy." The first statement from both the mother and child were lies. The child was a girl.

79. Does it Add Up?

They were grandmother, mother, and daughter. Two were mothers and two were daughters.

80. Alien Conference

127.

LOGIC ANSWERS

81. Car Grid

After going forward, you reverse.

82. The King Is In His All-Together!

It was a birthday parade where all of the participants carried pictures of themselves at birth.

83. Bush Fire

To put out the fire they used aeroplanes to scoop water out of the nearest lake. When they scooped the water out, they scooped him out as well. Water dropped on the fire and put it out but the fall killed the diver.

84. Household Enquiry

"Sally, are you in?" or "Are you there?" etc.

85. A Fruity Problem

The fruits are made of wax; they are candles, and the woman lit them before leaving the room so that they had burned down.

86. The Cheetah & the Hyena

Thursday.

87. Golfers

They were playing darts in the clubhouse. The object of the challenge was to see who could score the most with just 3 darts.

88. St. Joseph's Church

His father was the Italian Ambassador and he moved from Rome to Washington. Daniel only spoke Italian.

89. A Body Bag in the Suitcase

He was a part-time ventriloquist and it was his dummy.

90. My Homework is Right!

He was adding hours to his watch. $10\text{ o'clock} + 7\text{ hrs} = 5\text{ o'clock}$.

91. The Holiday Disaster

Bill Drallam (Mallard backwards) was a duck. They flew in front of a plane during lift-off and entered the engine intake, causing the plane to crash. The plane might have survived if only one or two ducks flew into the engine, but several birds were hit and drawn into other engines.

92. Leaky Pipe

The second leak was halfway up the pipe, which was horizontal. The first half was emptied in 1 hour, and with just the single leak left for the water to exit, it took another two hours.

93. The Inherited House

The sea had eroded the cliffs to within 30 yards of the garden. He found that it would be uneconomical to protect the house from further erosion. Experts had told him that it might only be 5 years before the mansion would be in the sea.

94. Cheap Shopper!

He had replaced all of the bar codes on the products with labels taken off small packs of the same items. The products he bought were all large packs and the bill should have been at least 3 times more. The shop assistant at the till raised the alarm when she saw one of the bar code labels was loose.

95. Two Brothers

The letter contained a white feather, a symbol of cowardice. In order to rid his family name of this slur, he was forced to act with bravery.

96. Dangerous Neighbours?

Mark. The policeman interpreted the question as "Question Mark Price!"

97. The Silence

Henry was the only parrot in the cage that could talk.

98. No Fire for Explorers

Neil and Dave were astronauts conducting an experiment on the Moon. The lack of oxygen caused all of their problems.

99. The Meeting

Rain, for which Iran is an anagram (as Nepal is an anagram for plane, and China for chain).

100. The Full Cask of Wine

He washes some small pebbles and sand with the fresh water, and puts the washed and dried materials into the bottle. He then puts the bottle-neck into the bung-hole. The pebbles and sand will fill into the cask to be replaced by wine into the bottle.

101. Problems With Air Pollution

Nobody lived to the east of the chemical plant.

102. Little Annie

Annie had been given a Monopoly game for Christmas and used money from its bank to purchase the goods. The storekeeper was not offended as he knew her very well.

103. The Share-Out

Child 1 had 10 25¢ coins, Child 2 had 16 10¢ coins, and Child 3 had 26 5¢ coins.

104. The Awkward Piano

The items stacked on the piano had fallen toward Joe, and he had said to Alf, "Give me a hand to move them off!" Alf rushed into the department store and removed a hand from a mannequin and put it in Joe's top pocket.

105. The Unlucky Locksmith

The locksmith had been shut in with the manager after he had set the automatically activated system. He was inside the room just collecting the last items from the manager.

LOGIC ANSWERS

106. The Fan

While he was celebrating it rained. The blue paint he had put on first was insoluble, but the yellow he put on top to create green was soluble, and had all washed off.

107. The Fire Drill

A swarm of killer bees had been sighted just outside the school.

108. The Bouquet of Flowers

1. 5
2. 17
3. 4
4. 10
5. 38

109. Car Park Overcrowding

Make all of the car park spaces at right angles to the wall.

110. Bob the Miser's Last Will

The Judge ruled that the money be shared equally between the relatives, but that they should each give Bob a cheque for the money taken. If these were not cashed within 1 year of Bob's cremation, then the money could be kept.

111. Lateral Thinking Gem From Times gone by

10T010 (Ten to Ten or 9.50 time).

112. Corporal in the Army

He was in uniform.

113. Is the Doctor Wrong?

It was the consultant physician supervising the student doctor who suffered the cardiac arrest. The student's prompt action saved his life. The farmworker was checked out, given a temporary plaster casing on his ankle, and was later allowed to go home.

114. The Twins Cause Confusion

115. The Glass Head

The two parts were lined up using strings with weights to guide the head down. Several piles of sugar or other water-soluble material were stacked at strategic locations on the plinth. The head was lowered and the ropes removed. The piles were then treated with a water spray starting from the central piles. (Ice could also be used.)

116. The Mountaineers

They were traveling to their destination by cruise ship. The hull of the ship was rammed during the night, and their cabin was below the water line. The pressure of the water held the door shut, they could not escape, and the rescuers were too late to save them.
